## December 2009 - Name Change on Some Flavoured/Coloured Products

In the Vision Multilex Drug Dictionary, flavours and colours are represented as Multilex DDF packs. However, where manufacturers include a flavour or colour as part of the brand name of the product, First Data Bank Europe (FDBE) identifies these as products instead of packs.

On receipt of the **December 2009** drug dictionary update, which contains these changes, you might need to replace some of the existing multi-flavoured products with one or more of the new single flavoured products.

You can either use the Therapy Replace function in Vision – Utilities - Drug Dictionary, which allows you to update drugs in bulk (see Vision on-screen help), or you can elect to review/reauthorise each of these products as you come across them in the individual patient record.

The products which are affected are:

Adcal-D3 chewable tablets will be replaced by:

- **Adcal-D3 chewable tablets**
- **Adcal-D3 Lemon chewable tablets**
