

The Vision Check-in touchscreen system enables patients to check themselves in for appointments quickly, using a freestanding kiosk or desk-mounted screen.

Simple to install and easy to use, Vision Check-in significantly reduces queuing times. The patient checks in by answering a short series of simple questions including date of birth and gender.

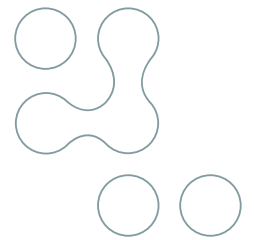

After successfully checking in, the appointment time, name of the doctor or nurse and the clinic location are confirmed – either on screen or via a printed slip.

Why choose Vision Check In?

- Easily customised to the needs of any reception area
- Option to display site, group or patient specific messages
- Easy verification of address and phone number details
- Usage levels can be monitored via the analysis package
- Full integration with Vision
- Queuing times are reduced

Patient benefits

- Quick and easy to use
- Receive directions to specific locations
- Multiple languages supported
- Wheelchair friendly kiosk available
- Option to check in for multiple appointments

Hardware Options

There are three styles of hardware, all of which support the same level of functionality with Vision Check-in. This provides a choice of styling to suit your practice and budget.

The Plexi-glass used to make the stands is a high-impact acrylic material that is incredibly strong and knock-resistant. The Plexi-glass units have holes pre-drilled, allowing them to be screwed down to the work surface or floor for additional security.

The three hardware options are:

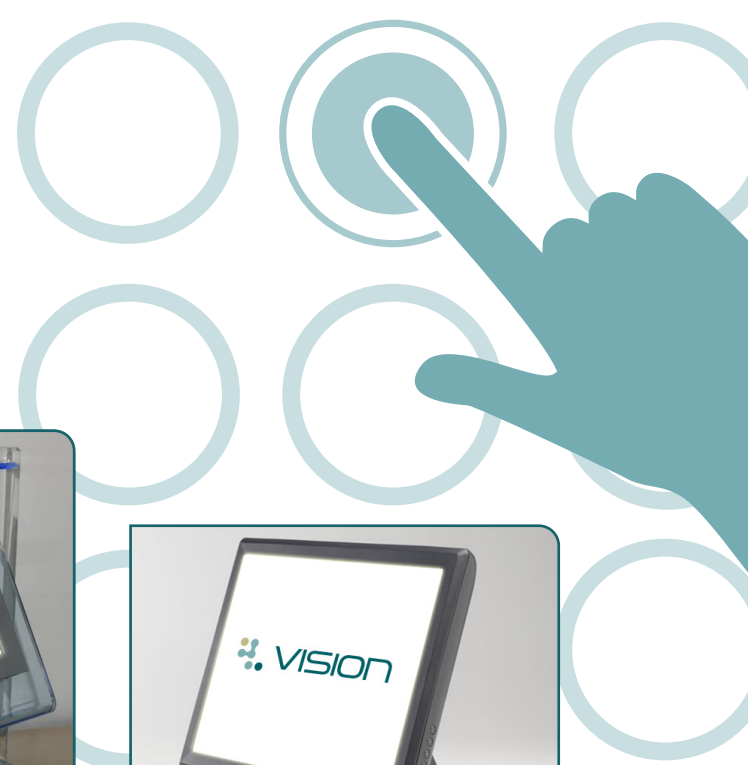

Floor Mounted
Plexi-Glass Unit

Desk Mounted
Plexi-Glass Unit

Desk Mounted ELO Unit
